

# Dual Battery Connect and Monitor Kit

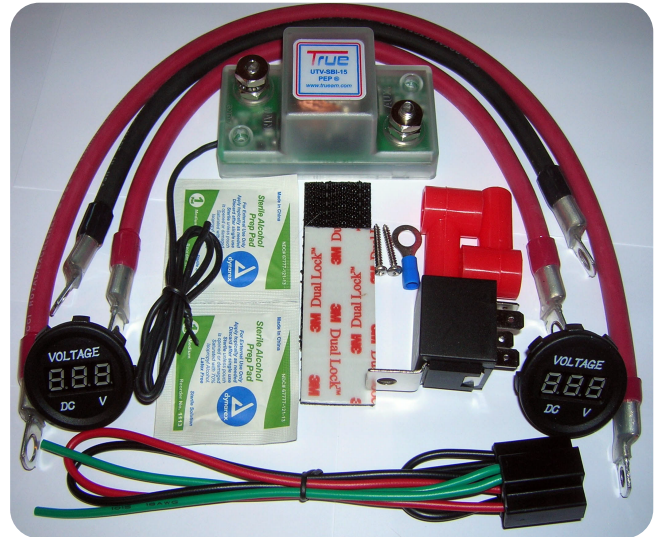

UTV-SBI-15CM

## Summary

During the testing and developing of our new UTV-SBI-15 isolator for UTVs we were asked by several people if there was something available to actually monitor the voltage of each battery separately. Thus the birth of the UTV-SBI-15CM. The 15CM includes not only two small voltmeters to connect to the two different posts of the isolator but we've taken it a step further and included an automatic relay and wire plug that will allow the meters to activate with the ignition like the other gauges on the UTV's.

## Function

By mounting these two small gauges and following the wiring instructions the UTV owner will have our industry leading dual battery isolation to protect them from being stranded and they will actually be able to monitor each battery's voltage with a mere glance at the waterproof gauges. Gauges are provided in two different color LED readouts to easily differentiate between the different batteries. The Green and Blue meters are also an eye pleasing accessory when added to your dash.

No need to spend time shopping for a "Better" way as we have spent hundreds of hours in development to bring you the absolutely best Dual Battery management products and to keep them at a low reasonable price. From a dealer's standpoint our TRUE UTV-SBI-15 or one of the kits should be included with every UTV sold if not installed along with the second battery and accessories connection block. Honestly dealers it is you that the consumer should be able to depend on for these answers when investing in their UTV.
